

Newsletter week 3, 2020

January 15th, 2020

Dear STATICH collaborators,

Happy New Year!

2019 has been an exciting year for STATICH. Many centres have been initiated throughout the year and recruitment of participants is well underway. We are happy about your enthusiasm for STATICH and looking forward to collaborating with you all in 2020!

Trial status

38 participants are currently enrolled in STATICH: **18 in STATICH-Antiplatelets** (patients with vascular disease) and **20 in STATICH-Anticoagulants** (patients with atrial fibrillation). **34 Scandinavian centres** have been initiated. Thank you very much for your time and efforts to recruit patients!

MRI and CT imaging

Of the 38 participants enrolled, 31 (82%) have undergone MRI examination before randomisation. We hope that as many patients as possible undergo **MRI with SWI** after ICH and before randomisation. **Please send both MRI and CT scans to the Trial Coordinating Centre when a new participant has been included.** This will enable us to investigate the importance of different imaging findings on the effects of antithrombotic treatment.

Please remember STATICH for your patients and let's continue working together to recruit new participants in 2020!

Best wishes,
