

Newsletter week 27

Dear STATICH collaborators,

Trial status

19 participants are currently enrolled in STATICH: **8 in STATICH-Antiplatelets** and **11 in STATICH-Anticoagulants**. We are pleased to be initiating the 30th participating centre during the summer months.

Reading tip for the summer

A useful update on diagnosis and treatment of intracerebral haemorrhage was recently published by Hostettler et al: <https://doi.org/10.1080/14737175.2019.1623671>. The issue of antithrombotic treatment after ICH is discussed in the section on secondary prevention, and **the authors recommend enrolment into trials like STATICH whenever possible**. The SoSTART trial in the UK (assessing anticoagulant treatment after ICH and collaborating with STATICH) has just recruited their 100th participant, and we hope this will inspire our investigators in STATICH to catch up with them!

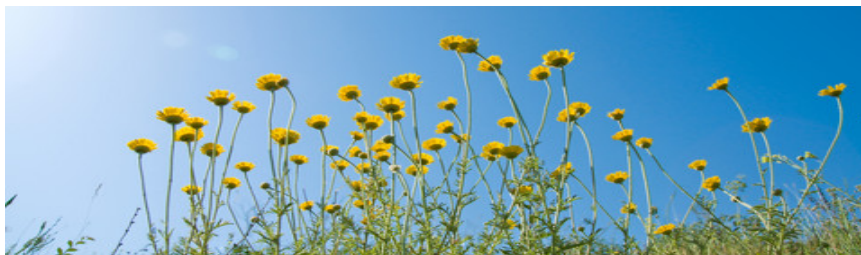

Reminder: STATICH collaborators' meeting at Nordic Stroke Congress 2019 in Tromsø

The meeting will take place during the lunch break on **Thursday August 22nd at 12.15-13.15** in the **meeting room "Smia" on the ground floor**. Coffee/tea will be served. Please bring your lunch. Reply to k.t.larsen@medisin.uio.no if you have a chance to attend. We hope to see you there!

Keep looking for eligible patients during the summer!

We are available throughout the holiday weeks and hope to hear from you:

Tel. +4722119911. E-mail: k.t.larsen@medisin.uio.no. Thank you for participating in STATICH, and we wish you all a good summer!

Best wishes,
