

## Newsletter week 30, 2019

Dear STATICH collaborators,

July 26<sup>th</sup>, 2019

### **Trial status**

We are pleased to announce that the 20<sup>th</sup> participant was included last week at Oslo University Hospital! **12 participants** are now enrolled into **STATICH-Anticoagulants** and **8** into **STATICH-Antiplatelets**.

### **Trial videos from the SoSTART trial**

SoSTART is our sister trial in the UK, assessing anticoagulant treatment for patients with atrial fibrillation after ICH, like the anticoagulant part of STATICH. The SoSTART team has made some informative videos about the trial for collaborators and participants:

- A 9-minute interview with the Chief Investigator Rustam Al-Shahi Salman about **how to explain the dilemma** about anticoagulation for atrial fibrillation after ICH.
- An 11-minute presentation about **how to explain the SoSTART trial** to patients and their carers (many aspects similar to STATICH).
- A 14-minute summary of **interviews with participants** in SoSTART about their experience with the trial.

We believe these videos can be of interest also for our STATICH-collaborators, to help with the recruitment of participants. You'll find links to the videos on the SoSTART website:

<https://www.ed.ac.uk/clinical-brain-sciences/research/so-start/collaborators/useful-resources>

Whether you are on holiday or back in the clinic, we hope your summer weeks are good, and that you are ready to help us recruit participants into STATICH in the months to come!

Best wishes,
